

UI/UX + Frontend Developer (B.Tech Level)

Objective:

To design and build a **security product website + dashboard** with backend integration and security-first UI thinking.

Scenario

Design and develop a **Security Product Website + Secure User Dashboard** for a secure data protection platform.

Task Requirements

1 UI/UX Design

Create Wireframes / Designs for:

- Landing Page (Security Product Messaging & Trust Building)
- Login + MFA UI
- User Dashboard
- Secure File Upload Page

Also submit a short note explaining:

- How design communicates trust
 - How security warnings / alerts are shown
 - How UX reduces user security mistakes
-

2 Frontend Development

Build using React / NextJS / Vue (Preferred).

Must Include:

- Responsive Design

- Form Validation
 - File Upload UI
 - Dashboard with:
 - File List
 - Security Status Indicator
 - Audit Log Table
-

3 Backend Integration

Use Mock API / Firebase / Simple Backend.

Must Demonstrate:

- Token-Based Login Handling
 - Secure API Calls
 - Error Handling without Data Leakage
-

4 Security-Aware Implementation

Implement:

- Input Sanitization
 - Secure Session Storage Handling
 - Basic Role-Based UI Access Control
-

Submission

- Source Code (Git Repository)
- UI Design Files
- Setup Instructions (if any)
